

RADIATOR CLEANING

EMORY
INDUSTRIAL SERVICES

CLEAN RADIATORS FASTER

We understand the costs and hassles dirty radiators on your pump trucks can cause. When they're in need of cleaning, you're probably used to taking them offsite for disassembly, power washing, drying and reassembly — a process that can take days and halt your productivity.

But those days are over. At Emory, we provide onsite professional dry ice blasting that thoroughly and efficiently cleans pump truck radiators within a few hours. That means your operators get back to work, keeping you productive and profitable.

WHY DRY ICE BLASTING?

- **Save time** instead of wasting dozens of hours with pressure washing.
- **Save money** over other cleaning methods that can cost over \$1000 more per radiator.
- **Extend the useful life of your radiators** by regularly cleaning your pump truck radiators with a simpler, more effective process.
- **Lower your radiator replacement costs** by ensuring your pump trucks run longer and more efficiently.
- **Keep your pump engines from overheating** with clean radiators that keep them cool all day long.
- **Minimize your maintenance downtime** by having your radiators dry ice blasted as they rotate through the yard for routine maintenance.
- **Manage your maintenance schedules** with complimentary, real-time cleaning notifications from Emory Industrial Services.

Got burned by dry ice blasting in the past?

Our professionals are highly trained and understand the oil and gas business, so you can feel confident we'll get the job done right the first time.

“When we have multiple units that need to be cleaned, pulling coolers ourselves for cleaning wastes shop space and is a slow process. Dry ice blasting is faster and easier.”

- Christopher Burton
Liberty Oilfield Services

ABOUT EMORY

CLEAN. SAFE. EFFICIENT.

Emory Industrial Services is your premier one-stop shop for dry ice blasting services for the Oil and Gas Industry. Our professionals are experts in the dry ice blasting process. We understand how dry ice blasting works best for radiators and other cleaning applications.

Our high-quality equipment combined with our expertise means you can get your toughest jobs done without damage to the underlying surface and without messy secondary waste. Dry ice blasting is nonabrasive, nonflammable, nonconductive and nontoxic, making it the ideal solution to reduce downtime and preserve the life of your expensive equipment.

When you call Emory, rest assured you're working with a company proud of its values and leadership in services for the oil and gas industry.

WHY EMORY?

- Onsite, professional cleaning by dry ice blasting experts
- High-quality services and equipment from a single source
- Reduced downtime
- No secondary waste (like sand and water) to remove
- No harmful cleaning chemicals or residues
- Quick response times

“Our Company has seen positive benefits from Dry Ice Cleaning. Our pump radiators have always had issues plugging up in the summer causing overheating problems. In the past, our only option was to pressure wash them. This not only doesn't clean them as well but the damage from a high-pressure fluid hitting the radiator is common. The Dry ice process seems to loosen partials that water will not. We find it economical compared to downtime.”

- Gary Worthen
